

LET'S BUILD TOGETHER

It is open source, and it is built to be built on.

The stack was built to be collaborative. This is what I have that you can use today: start with the capability, reuse the component, and check the status — some of it is still a design, and it says so.

01 Storage the host cannot read, with history

Powered by sgit, transfer protocol & browser vault · permissive code; CC BY documents

02 Versioned data with a clonable past

Powered by sgit, transfer protocol & browser vault · permissive code; CC BY documents

03 Managing and distributing sensitive data

Powered by Vaults on the same runtime · permissive code; CC BY documents

Healthcare data is the worked example; an MVP is built on it.

04 Voice into debriefs, wherever the voice already is

Powered by Voice Debrief + WhatsApp, file & agent integrations · permissive code; CC BY documents

WhatsApp, files and agents are already wired in.

05 A chat in your app that never holds a model key

Powered by Model call layer · permissive code; CC BY documents

06 Translation to executives, in any specialist domain

Powered by Boardroom, agent rooms & persona machinery · permissive code; CC BY documents

07 Knowing what your agents are doing, and describing it

Powered by Risk product & free behaviour-policy library · permissive code; CC BY documents

08 Scalable risk management

Powered by Risk acceptance framework · permissive code; CC BY documents

Published approach: a risk is accepted for a stated period. Research design; implementation not claimed.

09 Facilitating due diligence on your product

Powered by Write-only intake + seven-criterion evaluation framework · permissive code; CC BY documents

Use the scorecard for honest self-assessment: what their diligence will find, before it runs.

The infographic generator runs today, is used by a number of people, and has no way to pay for it.

Seven further companies are written up in full and given away under attribution licensing.
