HOW DOES YOUR FIRM SHARE DATA WITH ITS PORTFOLIO?

Better operations for investors.

Most of the data investors share is insecure — decks, data rooms, updates, diligence files, sent in the clear. Vaults fix that, and an MVP for investors already exists. The same stack gives you something new to ask of every company you back: a licence to operate for each agent it runs.

	YOUR OPERATIONS	WHAT EXISTS
02	**Share deal data, documents and updates in vaults the host cannot read — with full history, and a write-only link for founders to send you material.** Powered by sgit, transfer protocol & browser vault · permissive code; CC BY documents	Live. CLI in beta; 26 public vaults; 80+ endpoints and 3,000+ tests. Write-only intake built, never sold.
07	**Behaviour policies for the agents your portfolio companies already run — a licence to operate for each one, before it becomes your risk.** Powered by Risk product & free behaviour-policy library · permissive code; CC BY documents	Site v1.10, library and store live. No payment link; entry-tier application not located.
04	**A security review of a company you back, delivered as a vault rather than a PDF.** Powered by Report vault on the vault runtime · permissive code; CC BY documents	Designed 26 May. Deliverable shape built; demo specified.
05	**Explain a specialist domain — cybersecurity is one example — to a board in its own words and at its own altitude.** Powered by Boardroom, agent rooms & persona machinery · permissive code; CC BY documents	Original product existed. Agent rooms specified in March; persona generator built in August.
06	**Briefings for your role, with the evidence behind every line.** Powered by Role-aware briefings on semantic graphs · permissive code; CC BY documents	Live; named as the evidence research seed's live instance. Commercial state not verified in the brief.
03	**Manage and distribute sensitive portfolio data with per-recipient access.** Powered by Vaults on the same runtime · permissive code; CC BY documents	An MVP is built on it.

ONE PRODUCT TO DISCUSS

A security review of a company you are backing, scored against a published framework, signed by a named professional, at a fixed price, delivered as a vault.

Apply the scorecard during due diligence, with particular attention to business context and model survivability.

Companies to fund somebody to build. The rows on the founders sheet, and seven company seeds written up in full and given away under attribution licensing: A CV and job-search workflow · Pitch creation · A health score · Evidence research · An accountant workflow · A lawyer workflow · Local AI enablement. newsroom.sgit.ai/mvps/seed-companies.html

Let’s talk about how your firm shares data — and about the agents in your portfolio.
