

SERVICES AVAILABLE NOW

How do I manage, contain, monitor and ensure compliance of the agents already running?

These are services you can engage now. Each row states what it is, what it runs on, and how far along it is — some are live products, some are designs we deliver as engagements.

THE SERVICE	WHAT EXISTS
07 A licence to operate for each agent you already run. Powered by Risk product & free behaviour-policy library permissive code; CC BY documents	Site v1.10, library and store live. No payment link; entry-tier application not located.
08 Third-party and supply-chain management: what your vendors, and their agents, do with your data. Powered by Vaults plus behaviour policies permissive code; CC BY documents	Runs on the live vault runtime and the policy library. Not yet packaged as its own product.
02 A folder with history for anything you send out of the building. Powered by sgit, transfer protocol & browser vault permissive code; CC BY documents	Live. CLI in beta; 26 public vaults; 80+ endpoints and 3,000+ tests. Write-only intake built, never sold.
03 Manage and distribute sensitive data — healthcare data is the worked example. Powered by Vaults on the same runtime permissive code; CC BY documents	An MVP is built on it.
04 Ask your next security vendor for the report as a vault rather than a PDF. Powered by Report vault on the vault runtime permissive code; CC BY documents	Designed 26 May. Deliverable shape built; demo specified.
05 The board conversation, in the language and detail each executive needs — on cybersecurity or any specialist domain. Powered by Boardroom, agent rooms & persona machinery permissive code; CC BY documents	Original product existed. Agent rooms specified in March; persona generator built in August.
06 Briefings by role, with evidence behind every line. Powered by Role-aware briefings on semantic graphs permissive code; CC BY documents	Live; named as the evidence research seed's live instance. Commercial state not verified in the brief.
01 Debriefs from voice notes, wherever the voice already is. Powered by Voice Debrief + WhatsApp, file & agent integrations permissive code; CC BY documents	Live, earning, and run with a partner under a signed profit share.

START WITH AN AGENT YOU ALREADY RUN

Bring one agent you already run. You leave with a draft policy for it, corrected, as a file you keep. The library is free; the rows above state what is live and what is delivered as an engagement.

Bring one agent you already run.
